

## D. R. Joseph Celebrates 25 Years!

Today marks the 25th anniversary of our company's existence in the blown film extrusion industry. From our very modest beginnings in my garage back in 1988, we designed and built our first IBC system in 1989 (I say "we" because without my wife's support I would have been unable to do the work that I did). From there, word of mouth quickly made us an international company with installations in Canada, Denmark, France, and the Asian Pacific. Small successes led to small steps forward which led to more successes. I want to thank everyone for the part you played in us being successful! We look forward to continuing service in our industry.

B&W of our first system being developed in our garage in Arlington, TX 1989
