

New R&D/Training Lab Under Construction!

We are currently building a dedicated 800 sq ft R&D and training lab which includes a small scale 3 layer extrusion line. When the lab is completed, we will be opening it up for use by our customers who may need to train operators in the principles of blown film or produce and test a new formulation (each without taking a production line out of service). We feel the best investment is reinvestment and the ability to test materials and develop new talent best serves our industry. We will also be able to demonstrate our 3GIBC1, LF-Sizer and Seal-Cut products and also thickness measurement products from Kundig Control Systems. Updates will follow as the year goes on and we get closer to completion of our lab.

Our new lab facility structure is complete
