

WinViewer Operator Interface

Remote Visualization / Operation Solutions for DRJ Control Systems

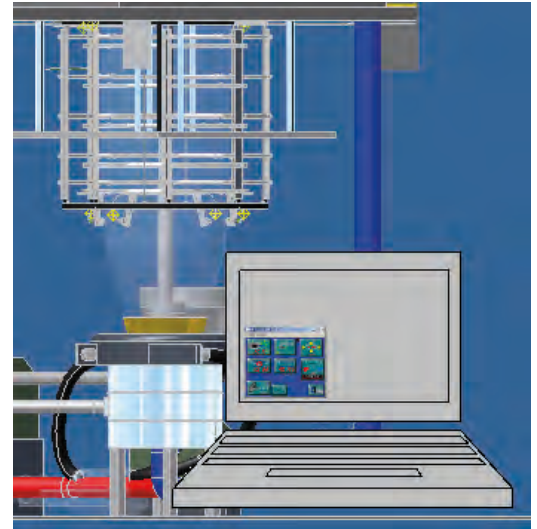

Create Multiple DRJ System Control Points Using a PC Based Application

The WinViewer operator interface provides an easy solution for installing multiple operating or monitoring points for the 3rd & 4th Generation control systems (IBC, LF-Sizer, TDK-500 InstaGauge & Seal-Cut).

All that is required is a Windows based PC connected to the system via standard Ethernet cabling.

There are two solutions available as shown in the table below:

WinViewer Type	Main Features	Limitations	Licensing
Viewer	Adds a remote PC based operating point to the supplied IBC, LFSizer, SealCut or InstaGauge systems with multiuser support.	Up to 3 simultaneous remote viewers per licensed system	Each system must be licensed
Operate	Replaces standard touch screen with a Windows based PC application that provides 100% functionality. *Only available for 3G/4G IBC Systems & LF-Sizer.	One per each system	Each PC must be licensed via USB memory stick (must remain installed)

The **Win Viewer** product is an economical choice when a second control point is needed, or if remote viewing of the system is required by supervision. It is also a great training tool that allows training sessions in a quiet environment but at the same time provides a live, working system.

The **Win Operate** product is a logistical choice when your blown film line already has enough operator screens and putting an application window running the IS-IBC1® or LF-Sizer® system makes more sense than adding yet another touch screen.

WinViewer Systems are available with all new systems, or retrofits to 3G and 4G systems. To learn more, or for a quote to add a WinViewer Product to your DRJ system, contact sales at: sales@drjosephinc.com.
